

Measure	soundas stored	
Entropy (bits of 8)	6.834	7.9999
Correlation, lag 1	0.985	-0.0015
Correlation, lag 2	0.943	-0.0006
Spectral flatness†	0.003	0.561
χ^2 against flat*	1.86e+07	284

Two stored copies	NSCR	UACI
Sealed twice	99.61 %	33.48 %
1 sample changed	99.61 %	33.46 %
Random (ideal)	99.61 %	33.46 %

37.5 s of 16-bit samples at 44.1 kHz, sealed uncompressed for this figure (the system seals the encoder's frames).

* a flat histogram stays under 293 in 95 % of cases.

† white noise: 0.56. Shading: 80 dB, darker is stronger.

Stored against the sound: correlation -0.0007.

Repeated 16-byte pieces: 690 in the sound, 0 as stored.

Opening gives back every byte: yes.

Key wrong in one bit: refused; without the checks it gives noise (correlation +0.0006).
