

ClientHello arrives

6 fragments; the sender's address proves nothing

Reassembly

128 partial messages; a full table drops its oldest

The same hello within 10 s?

yes: the stored answer is sent again

Ration left?

a quarter of one core for failed checks; empty: dropped

UAV known, nonce new, time within 120 s?

no: refused, at no cost

ML-DSA-87

verify (pinned key): 0.08 ms, 0.45 ms on a Pi
fails: refused, and one unit of the ration is used

ML-KEM-1024

X25519

ML-DSA-87

ServerHello

encapsulate, derive, sign; 64 half-open sessions at most

without public-key work

public-key work

a genuine hello never uses the ration: only checks that fail do
