

Ground control station

holds the clip and its key

the sealed clip, block by block

seconds a to b

its own keys and the clip key
never leave it

every other block stays sealed: its key
cannot be worked out from those released

Excerpt

the sealed blocks a to b

the key-tree nodes that cover
exactly a to b

hashes that prove their place
in the clip

head, root and signature
of the UAV

Anyone with the UAV's public key

no secret is needed to verify

- ① **ML-DSA-87** the root is the UAV's
- ② **SHA-256** these are blocks a to b of that clip
- ③ **HMAC-SHA-256** each key is the block's own
- ④ **AES-256-GCM** open them

what was said, and when and where
the UAV recorded it
